

TREATMENT COURT URINE TESTING CONTRACT

Recent advances in the science of alcohol/substance detection in urine have greatly increased the ability to detect even trace amounts of alcohol and substance consumption. In addition, these tests are capable of detecting alcohol/substance ingestion for significantly longer periods of time after a usage episode. Because these tests are sensitive, in rare circumstances, exposure to non-beverage alcohol sources can result in detectable levels of alcohol (or its breakdown products). In order to preserve the integrity of the treatment court testing program, it has become necessary for us to restrict and/or advise treatment court participants regarding the use of certain products.

It is **YOUR** responsibility to limit your exposure to the products and substances detailed below that contain ethyl alcohol."

It is **YOUR** responsibility to read product labels, to know what is contained in the products you use and consume and to stop and inspect these products **BEFORE** you use them. ***Use of the products detailed below in violation of this contract will NOT be allowed as an excuse for a positive test result. When in doubt, don't use, consume or apply.***

Dilutes: A dilute urine specimen will not be allowed and can be avoided. Dilutes will be considered positive and will be sanctioned appropriately. If you have a question, contact your Probation Officer or Treatment Provider.

Cough syrups and other liquid medications: Treatment court participants have always been prohibited from using alcohol-containing cough/cold syrups, such as Nyquil. Other cough syrup brands and numerous other liquid medications, rely upon ethyl alcohol as a solvent. Treatment court participants are required to read product labels carefully to determine if they contain ethyl alcohol (ethanol).

All prescription and over-the-counter medications should be reviewed with your case manager before use. Information on the composition of prescription medications should be available upon request from your pharmacist. Non-alcohol containing cough and cold remedies are readily available at most pharmacies and major retail stores. If you have any questions about a particular product, bring it in to discuss it with your Probation Officer.

Non-Alcoholic Beer and Wine: Although legally considered non-alcoholic, NA beers (e.g. O'Doul's®, Sharps®) do contain a residual amount of alcohol that may result in a positive test result for alcohol, if consumed. Treatment court participants are not permitted to ingest NA beer or NA wine.

Food and Other Ingestible Products: There are numerous other consumable products that contain ethyl alcohol that could result in a positive test for alcohol. Flavoring extracts, such as vanilla or almond extract, and liquid herbal extracts (such as Ginkgo Biloba), could result in a positive screen for alcohol or its breakdown products. Communion wine, food cooked with wine and flambé dishes (alcohol poured over a food and ignited such as cherries jubilee, baked Alaska) must be avoided. Consumption of any food products that contain poppy seeds or creatine supplements is prohibited. Read carefully the labels on any liquid herbal or homeopathic remedy and do not ingest without approval from your Probation Officer.

Synthetic Substances: Any substances which are mood/mind altering are prohibited in the program. Such products as K2 or Spice are prohibited and tested for. If you are unsure about the product, contact your Probation Officer.

Mouthwash and Breath Strips: Most mouthwashes (Listerine®, Cepacol®, etc.) and other breath cleansing products contain ethyl alcohol. The use of mouthwashes containing ethyl alcohol can produce a positive test result. Treatment Court participants are required to read product labels and educate themselves as to whether a mouthwash product contains ethyl alcohol. Use of ethyl alcohol-containing mouthwashes and breath strips by Treatment Court participants is not permitted. Non-alcohol mouthwashes are readily available and are an acceptable alternative. If you have questions about a particular product, bring it in to discuss with your Probation Officer.

Hand sanitizers: Hand sanitizers (e.g. Purell®, Germex®, etc.) and other antiseptic gels and foams used to disinfect hands contain up to 70% ethyl alcohol. Excessive, unnecessary or repeated use of these products could result in a positive urine test. Hand washing with soap and water are just as effective for killing germs.

Hygiene Products: Aftershaves and colognes, hair sprays and mousse, astringents, insecticides (bug sprays such as Deet and OFF) and some body washes contain ethyl alcohol. While it is unlikely that limited use of these products would result in a positive test for alcohol (or its breakdown products excessive, unnecessary or repeated use of these products could affect test results.) Participants must use such products sparingly to avoid reaching detection levels. Just as the court requires Treatment Court participants to regulate their fluid intake to avoid dilute urine samples, it is likewise incumbent upon each participant to limit their use of topically applied (on the skin) products containing ethyl alcohol.

Solvents and Lacquers: Many solvents, lacquers and surface preparation products used in industry, construction, and the home, contain ethyl alcohol. Both excessive inhalation of vapors, and topical exposure to such products, can potentially cause a positive test result for alcohol. As with the products noted above, Treatment Court participants must educate themselves as to the ingredients in the products they are using. There are alternatives to nearly any item containing ethyl alcohol. Frequency of use and duration of exposure to such products should be kept to a minimum. A positive test result will not be excused by reference to use of an alcohol-based solvent. If you are in employment where contact with such products cannot be avoided, *you need to discuss this with your Probation Officer.* Do not wait for a positive test result to do so.

Diet Pills and Supplements: Although can be purchased over the counter, some popular weight-loss supplements contain a synthetic compound that is chemically similar to the drug amphetamine. Kombucha tea is prohibited and consumption is not accepted as an excuse for a positive alcohol result.

Electronic Cigarettes (E-Cigarettes): Although legal, some electronic cigarette liquid contains water, ethyl alcohol (the same alcohol in liquor, beer and wine), and food-grade artificial flavoring.

Remember! When in doubt, don't use, consume or apply.
